LEGAL INFORMATION

We recommend that you seek financial, tax, legal, or other professional advice before undertaking any of the above actions. This document is not an exhaustive legally binding document and does not create any legal relationship with you, including not containing an offer or invitation to make investments. This document is intended for informational purposes only and is not advice or a recommendation. All legal documentation governing the interaction between users and the digital ecosystem service “BUDRIGANCOIN” is determined by the documentation provided during registration on Budrigan.com, and no part of this document contains any additional guarantees of loss compensation, representations of circumstances, or promises to comply with applicable laws.

When using the ecosystem services of “BUDRIGANCOIN” and the “BUDRIGANCOIN” tokens, you bear full responsibility for complying with any applicable laws in the jurisdiction of your residence. This document and related documentation may contain legal disclaimers, limitations of liability, descriptions of circumstances, arbitration clauses, and liability restrictions that may affect your legal rights. Before entering into any legal relationship with “BUDRIGANCOIN”, we recommend that you seek professional advice. The unitary “BUDRIGANCOIN” token is not a currency, commodity, currency swap, or security. Please note that there are certain restrictions on the use of the Service, participation in distribution, and ownership of “BUDRIGANCOIN” tokens if you or your representative, directly or indirectly, are under the control or supervision of a person recognized as a restricted person and/or under any sanctions. A “Restricted Person” for the purposes of this document means an individual and/or legal entity holding citizenship, place of birth, residence, or location in the United States and Canada, as well as countries subject to sanctions restrictions imposed by the UN Security Council.

INTRODUCTION

The modern financial world is undergoing a transformation: investors are increasingly turning their attention to digital assets that combine innovative technologies with real economic value. However, most cryptocurrencies on the market suffer from high volatility and a lack of fundamental value, which reduces their attractiveness as long-term investment instruments.

Budrigancoin is a next-generation digital asset created by the American hedge fund

BudriganTrade. Unlike most cryptocurrencies, Budrigancoin is directly tied to the real assets of the hedge fund, which provides it with strong fundamental value and reduces risks for investors.

The issuance of Budrigancoin is limited — 100,000,000 tokens have been minted with no possibility of additional generation. This model creates scarcity, increases the investment attractiveness of the asset, and makes it comparable to investments in rare works of art, unique collectibles, or limited-edition securities. The primary purpose of Budrigancoin is capital preservation and growth, rather than use as a means of payment. This makes the token an instrument for long-term investors focused on stability, transparency, and reliability.

Budrigancoin combines the technological advantages of blockchain with the financial stability of traditional assets, creating a new format of digital capital for global investors. In addition to the development and issuance of the digital asset BudriganCoin, the project ecosystem includes a fully functioning proprietary cryptocurrency exchange — BudriganMarket.com. This trading platform is designed as an integrated infrastructure to ensure liquidity, expand accessibility, and strengthen the long-term utility of the token within a secure and regulated market. BudriganMarket.com offers extensive opportunities for trading digital assets, including multiple trading pairs, an advanced order execution system,

institutional-grade security standards, and a user-friendly interface for both retail investors and professional market participants. BudriganCoin serves not only as a backed investment token but also as the native token of the BudriganMarket exchange ecosystem, providing users with additional advantages: reduced trading fees, participation in exclusive investment products, priority access to new listings, and other bonuses for holders.

Direct integration of the token with the exchange infrastructure enhances its fundamental utility, promotes organic demand formation, and supports a sustainable growth model for the entire BudriganTrade ecosystem.

MARKET ANALYSIS

1. Global Growth of the Digital Asset Market

In recent years, the digital asset market has shifted from the category of experimental technologies to a full-fledged financial sector. Institutional investors — funds, banks, corporations — are actively increasing the share of cryptocurrencies and tokenized products in their portfolios. According to analytical agencies, the capitalization of the cryptocurrency market has already exceeded trillions of dollars, and its growth rate remains higher than that of most traditional financial instruments.

However, despite the scale of the market, it remains highly fragmented:

most cryptocurrencies have no fundamental value,

their price is determined exclusively by demand and speculative activity, volatility remains a key risk factor.

This imbalance creates space for the emergence of new assets that combine the technological advantages of cryptocurrencies with backing by real value.

2. Investment Trend: Transition to Asset-Backed Tokens

The market is moving toward asset-backed digital assets — tokens that have a direct link to real assets: funds, precious metals, real estate, commodity reserves. The reasons for this trend are obvious: reduced risks and lower volatility, the ability to assess fundamental value

trust from institutional investors

long-term investment sustainability,

attractiveness as a protective asset during periods of instability.

Budrigancoin fully corresponds to this market trend: it is backed by the assets of the BudriganTrade hedge fund and has a limited issuance, making it an analogue of a next-generation tokenized financial instrument.

3. **Growing Demand for Capital Preservation Instruments**

In conditions of global economic instability, investors seek protective assets capable not only of preserving but also increasing capital. Traditional instruments — gold, bonds, works of art — remain in demand but have limitations:

complexity of purchase and storage,

limited liquidity,

a high entry threshold for private investors.

Budrigancoin, combining limited issuance and backing by real assets, is positioned as a digital analogue of a “rare investment asset,” accessible to any investor anywhere in the world.

4. **Scarcity as a Factor of Value Growth**

A key advantage of many high-value assets is the limited supply.

Collectibles, rare coins, unique

works of art increase in price not only due to demand but also due to the impossibility of reproducing them in unlimited quantities.

Budrigancoin uses the same economic model:

issuance is fixed at 100,000,000 tokens,

additional issuance is impossible,

demand is formed by the growing investor base of the hedge fund,

supply remains stable and limited.

Such a market structure creates natural long-term upward pressure on the token’s value.

5. **Positioning of Budrigancoin in the Investment Landscape**

Budrigancoin occupies a unique niche between traditional financial instruments and cryptocurrencies:

Segment	Advantages	Disadvantages	Budrigancoin Solves
Traditional assets (gold, stocks, bonds)	Reliability, long history, stability	Slow growth, limited accessibility	Accessibility + digital format
Classic cryptocurrencies	High liquidity, innovation	Volatility, lack of fundamental value	Fundamental backing
NFTs, art, collectible assets	Uniqueness, scarcity	Low liquidity, subjective valuation	Clear liquidity + rarity

Budrigancoin combines the advantages of all three segments and eliminates their key disadvantages, forming a new class of digital investment assets.

PROBLEM AND SOLUTION

PROBLEM

The modern digital asset market is developing rapidly, yet it remains extremely unstable and unpredictable. Despite the technological innovation of blockchain, most cryptocurrencies lack fundamental value and are subject to high volatility. This creates a number of systemic problems:

1. Lack of real backing for most cryptocurrencies

Most tokens exist solely due to market demand and investor sentiment. Their value can change by tens of percent within a day because:

- the price is not tied to real assets,
- there is no underlying financial model,
- there is no institutional support.

Investors are left alone with market fluctuations.

2. Risks of devaluation during market crises

Cryptocurrency assets often lose value after:

- the emergence of new competitors,
- bull and bear market cycles,

macroeconomic shocks,
manipulations by major players.
Investing in such a market becomes highly risky and unpredictable.

3. **Lack of reliable capital preservation instruments**

The market has almost no digital assets that act as:

a long-term store of value,
a capital preservation instrument,
an analogue of gold or securities but on the blockchain.

Investors are forced to choose between volatile tokens or the gradual devaluation of traditional currencies.

4. **Insufficient transparency of projects**

Most crypto projects do not have:
connections with real businesses,
clear sources of revenue,
financial reports or audits.
This decreases trust and makes
investor risks opaque.

5. **Unlimited token issuance**

One of the primary problems is
projects that:
can issue new tokens,
manipulate supply,
affect price through dilution of
investor shares.

This makes investing in such
tokens unpredictable and unsafe.

SOLUTION: BUDRIGANCOIN

BudriganCoin was created to eliminate the key problems of the cryptocurrency market, offering investors a new type of digital asset — backed, limited, stable, and institutionally managed.

1. **Fundamental value tied to real assets**

BudriganCoin is fully backed by the assets of the American hedge fund
BudriganTrade.

This creates a stable underlying value available for verification and analysis.

The investor receives:

a digital asset backed by the real economy,

protection from market manipulation,
long-term stability.

2. Limited issuance of 100,000,000 tokens

BudriganCoin is a deflationary asset with a fixed supply.

There is no possibility of:

increasing issuance,

diluting investor shares,

artificial price pressure.

Scarcity creates natural deficit and stimulates value growth.

3. Investment asset, not a payment instrument

The main role is capital preservation and growth, not payments.

This reduces volatility and
makes the token an analogue

of:

digital gold,

a fund instrument,

a premium-class investment
asset.

Future value is formed not by
transactional activity but by
the value of the fund's assets.

4. Institutional control and
transparency

BudriganTrade:

publishes asset reports,

undergoes independent

audits,

adheres to U.S. financial standards.

This provides a level of trust unavailable to most crypto projects.

5. Predictable and sustainable growth model

The token price is formed based on:

growth of the fund's assets,

increase in the number of investors,

limited token supply,

market demand for asset-backed digital assets.

The model does not depend on hype or manipulation.

CONCLUSION

BudriganCoin addresses the key problems of the cryptocurrency market by creating a reliable digital asset for long-term investors. It combines blockchain technology with real

financial infrastructure, forming a sustainable ecosystem capable of enduring market cycles and ensuring capitalization over many years.

ADVANTAGES OF BUDRIGANCOIN

Budrigancoin combines technological innovation, financial stability, and a well-designed economic model. Below are the key advantages of the token that make it unique in the digital asset market.

1. **Fundamental Backing by Hedge Fund Assets**

The main distinction of Budrigancoin from most cryptocurrencies is its connection to the real assets of the American hedge fund BudriganTrade. This provides:
a stable minimum value,
reduced market volatility,
investor trust,
protection against devaluation.

Thus, Budrigancoin acts as a digital equivalent of a backed investment instrument.

2. **Limited Issuance with No Possibility of Increase**

The total issuance is fixed at 100,000,000 tokens, and the protocol does not allow for any additional minting. This factor creates a natural scarcity, which over time increases the investment attractiveness of the token, similar to works of art or collectible assets.

Scarcity → increased demand → limited supply → higher value.

3. **Investment Asset, Not a Payment Medium**

Budrigancoin is created not as a currency for daily transactions but as a tool for capital preservation and growth.

This approach makes the project model stable, predictable, and oriented toward long-term investors:

no pressure from micro-transactions,
minimal influence of external factors,
high resilience during market fluctuations,
focus on capitalization growth rather than turnover.

4. **Risk Reduction for Investors**

Traditional cryptocurrencies often lack intrinsic value and are subject to fluctuations caused by market speculation. Budrigancoin reduces these risks through:

backing by real assets,
a transparent management model,
support from a fund committed to maintaining the token's economic balance,
fixed issuance.

This makes it an attractive instrument even for conservative investors.

5. **Transparency and Trust**

The project is based on the infrastructure of an American hedge fund, which complies with regulatory and financial reporting requirements. This ensures: transparency in asset management, adherence to international standards, increased trust from institutional investors, reliability in token storage and circulation.

6. **Accessibility for Global Investors**

Unlike traditional hedge fund instruments, access to Budrigancoin is open to any

investor, regardless of country of residence or capital size. Thanks to its digital form, the token is:

easy to purchase,
easy to store,
easy to transfer between participants.

Budrigancoin democratizes access to high-yield instruments previously available only to large investors.

7. **Balance of Liquidity and Rarity**

Rare assets usually suffer from low liquidity, while liquid tokens often lack rarity. Budrigancoin combines both qualities: the token is freely traded and

highly accessible for transactions;
its supply is strictly limited, supporting value growth.

Thus, Budrigancoin becomes a rare asset with high liquidity — a combination that is difficult to find in the market.

8. **Infrastructure Readiness for Ecosystem Expansion**

Budrigancoin can become the core of a future financial ecosystem, including: investment products,

profit distribution programs,
tokenized funds,
partnership projects,
integration into the fund's digital platforms.

This creates potential for long-term development and increased token value.

ROADMAP

2025

Q4 2025 — Technical Project Launch

- Completion of development and testing of the Budrigancoin smart contract.
- Launch of the official project website and media platform.
- Finalization and publication of White Paper version 1.0.
- Internal testing of the token within BudriganTrade infrastructure.
- Issuance of a limited token supply of 100,000,000.
- First brand publication and opening of official communication channels.
- Initial listing of Budrigancoin on a DEX (decentralized exchange).
- Beginning of community building and project information base formation.

2026

Q1 2026 — Regulation and Infrastructure

- Creation of the project's legal structure in accordance with U.S. regulations.
- Preparation of documentation on token backing by hedge fund assets.
- Audit of the smart contract by an independent certified company.
- Development of the BudriganTrade investor dashboard.
- Start of integrating Budrigancoin into the fund's internal financial platform.

Q2 2026 — Products and Ecosystem

- Integration of Budrigancoin into corporate wallets and custodial solutions.
- Preparation of a transparent reporting system on the fund's asset status.
- Launch of the first informational marketing campaign (USA + Europe).
- Expansion of communities: Telegram, Discord, X.

Q3 2026 — Exchange Growth

- Conducting a Private Round for hedge fund investors.
- Preparation and submission of applications for listing on centralized exchanges (CEX).
- Integration of the token into analytics platforms: CoinMarketCap, CoinGecko.
- Creation of a liquidity fund for DEX.

Q4 2026 — Public Growth

- Active scaling of marketing activities.
- Publication of quarterly financial reports on backing assets.
- Expansion of the project's global presence (North America, Europe, Asia).

2027

Q1 2027 — Institutional Development

- Additional listings on major exchanges (Tier-1).
- Integration into third-party crypto wallets (Ledger, TrustWallet, etc.).
- Launch of a loyalty program for long-term holders.
- Launch of reporting with confirmation of token backing by fund assets (quarterly proof reports).

Q2 2027 — Ecosystem of New Products

- Launch of the BudriganTrade mobile application for token holders.
- Implementation of an OTC platform for large investors.
- Start of development of the fund's first tokenized investment products.
- Expansion of the project's legal presence to new markets.

Q3 2027 — Investment Functionality

- Launch of staking modules and sustainable long-term investment programs.
- Creation of a liquidity support fund on major exchanges.
- Integration of Budrigancoin into partner financial ecosystems.

Q4 2027 — Consolidation and Future Planning

- Publication of expanded audit reports for 2026–2027.
- Preparation of Budrigancoin for inclusion in crypto index portfolios and ETF structures.
- Launch of a global partnership program for institutional and private investors.
- Development of a growth strategy for 2028–2030.

BUDRIGANCOIN TOKENOMICS

TOKEN DISTRIBUTION (ALLOCATION)

The proposed logical distribution scheme ensures a balance between liquidity support, community rewards, asset reserve, and long-term incentive pools:

Category	% of Issuance	Number of Tokens
Reserve / Backing	40%	40,000,000
Private / Institutional Investors	20%	20,000,000
Liquidity (DEX/CEX/LP)	15%	15,000,000
Team & Advisors	10%	10,000,000
Staking / Rewards	7%	7,000,000
Marketing & Ecosystem	6%	6,000,000
Treasury / Partnerships	2%	2,000,000
Total	100%	100,000,000

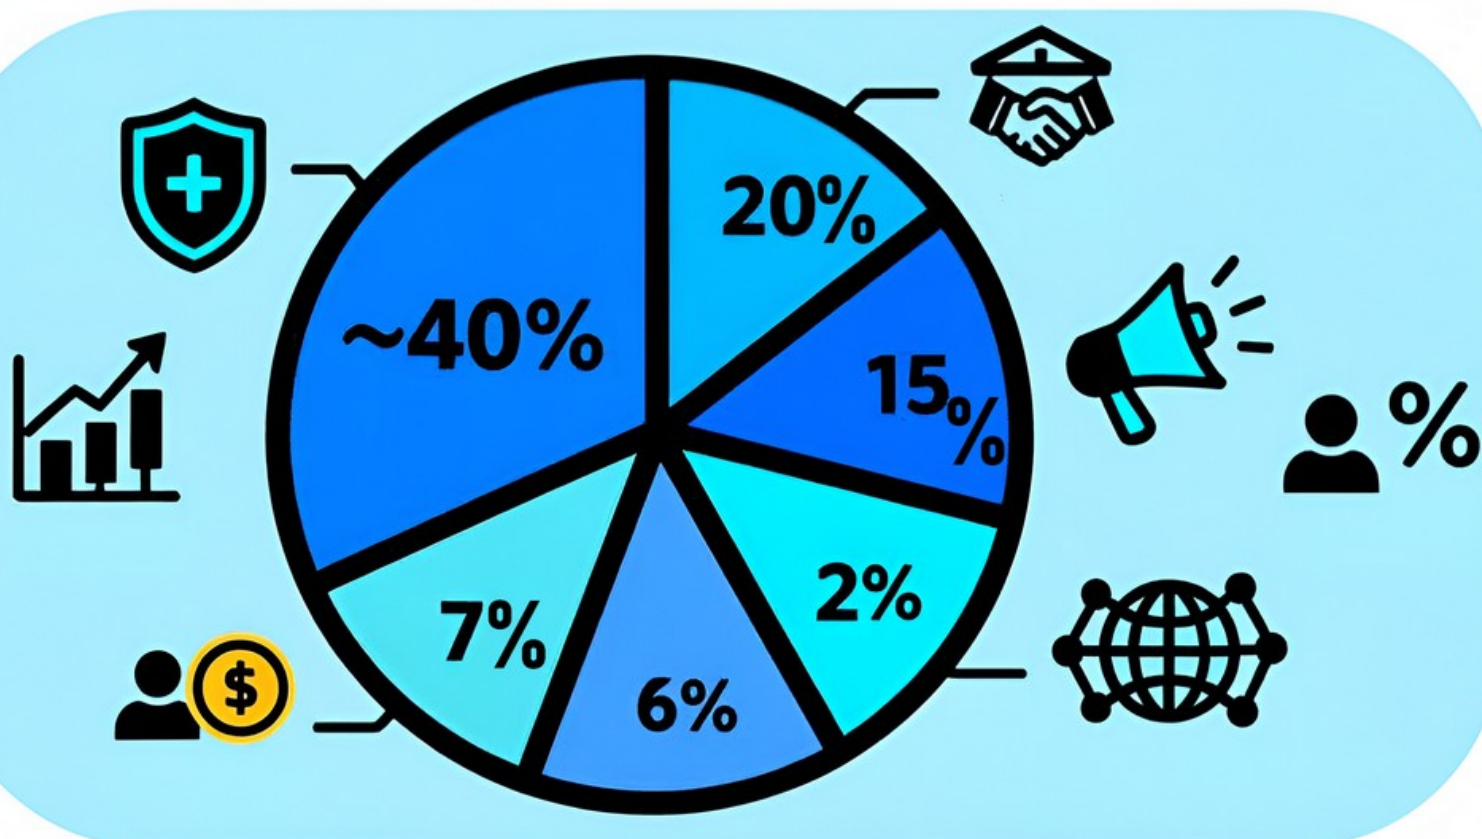

Category Explanations:

- **Reserve / Backing (40%)** — part of the issuance is technically held/tied to the fund’s assets as a token “backup”; serves as the main source for buybacks/compensation, internal programs, and trust-building (held in the fund’s custodial account).
- **Private / Institutional (20%)** — allocated for initial investment rounds and strategic partners. Lock-up/vesting schedules apply.
- **Liquidity (15%)** — liquidity pool on DEX/CEX, market-making, ensuring immediate trading activity.
- **Team & Advisors (10%)** — incentives for key team members and advisors, with strict vesting conditions.
- **Staking / Rewards (7%)** — rewards for holders/stakers, retention incentive programs. Payout source: allocated tokens + a share of fund profits.

- **Marketing & Ecosystem (6%)** — promotion, partnership integrations, SDK, developer grants.
- **Treasury / Partnerships (2%)** — strategic collaborations, legal expenses, unforeseen operational needs.

Vesting, Lock-ups, and Issuance Policy

To minimize market pressure and maintain investor trust, transparent unlocking schedules are applied for internal and institutional pools.

Team & Advisors — 10,000,000 BUDRIGANCOIN

- Vesting: 4 years (48 months) with a 1-year cliff (first unlock after 12 months).
- After the cliff: linear monthly unlocking of the remaining tokens over 36 months.
- Purpose: incentivize long-term team commitment and prevent token dumping.

Private / Institutional — 20,000,000 BUDRIGANCOIN

- Lock-up: minimum 12 months from initial placement (listing/close of sale).
- Unlock: 25% after lock-up ends + linear unlocking of remaining 75% over the next 9 months (monthly).
- Possible individual terms for strategic partners may apply.

Advisors

- Vesting: 24 months with a 6-month cliff; subsequent linear unlocking.

Liquidity / Marketing / Staking / Treasury

- **Liquidity (15%)** is released gradually upon listing and supported via replenishment mechanisms (buybacks / reserves).
- **Staking / Rewards (7%)** are issued according to a pre-defined schedule and used solely for ecosystem incentives; not fully distributed at once.

Price Support Mechanisms and Holder Yield

Since the token is backed by hedge fund assets, the project uses a combination of:

NAV Reporting and External Audit

- Quarterly reports on fund asset value with public summaries (proof reports).
- Annual audit of assets and operations by a third-party auditing firm (audit summary published).
- Publication of key KPIs: Total Fund Assets (USD), Free Cash, Liabilities, NAV per token.

Buyback / Treasury Policy

- Excess fund profits (per supervisory board decision and after reserving operations) are partially used to buy back tokens on open markets or DEX.
- Bought-back tokens may:
 - **Burned** — reducing circulating supply and enhancing scarcity; or
 - **Held in treasury** for future liquidity/reward programs.
 - Buyback policies and parameters (profit percentage, frequency) are approved by the management board and results are publicly reported.

Dividend / Income Model (Optional)

- Possible and recommended to implement partial profit distribution to holders (via buyback / stable currency or in-kind), if jurisdiction and regulations allow. Compliance considerations apply.

Staking / Rewards

- Holders participating in long-term staking programs receive Budrigancoin rewards from the 7% pool or a portion of fund revenues, incentivizing token retention and reducing short-term selling pressure.

Liquidity and Listings

- Initial DEX Listing (completed Q4 2025) — base liquidity provided.
- Gradual addition of liquidity on CEX (Tier-2 → Tier-1) per the roadmap.
- Liquidity fund formed from allocated 15% + buybacks to ensure market depth and spread stability.
- Market makers and LP incentives may be used to support the order book.

Valuation Model and Growth Scenarios

The key reference is NAV, not short-term market price. However, Budrigancoin's market price depends on:

1. Dynamics of Total Fund Assets (growth/decline of backing assets).
2. Liquidity level and trading activity.
3. Investor trust — ensured through transparency and audits.
4. Buyback / burn policy.

Illustrative Scenarios:

- **Base scenario:** slow, steady growth of fund assets → NAV rises 5–8% annually → Budrigancoin market price approaches NAV with premium/discount depending on liquidity.
- **Aggressive scenario:** strong fund profits and active buybacks → reduced circulating supply → price growth due to scarcity effect + NAV increase.
- **Negative scenario:** fund portfolio decline → NAV decreases → Budrigancoin price adjusts downward (asset diversification risk).

Key Risks:

- Market risk of the backing assets.
- Regulatory risks (especially regarding profit distribution).
- Liquidity risk (low demand/shallow market).
- Operational risk (management errors, security).

Mitigation Measures:

- Diversification of the fund's portfolio.
- Regular external audits and public reports.
- Transparent buyback policy and management structure.
- Asset storage with recognized custodians and use of insurance coverage where possible.
- Strict vesting conditions for the team and investors.

Legal and Compliance Considerations:

- BudriganTrade commits to complying with KYC/AML requirements for investors in private rounds and when connecting to CEX.
- For public ownership of Budrigancoin — local and international regulations will be observed (legal opinions are prepared and periodically updated).
- Profit distribution and buyback policies are subject to legal review before implementation.

Reporting, Transparency, and Metrics (On-Chain / Off-Chain):

Public KPI (Quarterly):

- Total Fund Assets (USD) — total value of assets.
- NAV per Budrigancoin.
- Circulating Supply — current circulating volume.
- Liquidity Pool Sizes (DEX/CEX).
- Buyback / Burn operations (number of tokens, date, funding source).
- Audit reports and summaries.

On-Chain: All transactions related to buyback/burn and token movements are published on the blockchain; corresponding reports are linked to tx-ids for verification.

Integration of Tokenomics into Roadmap (Key Events):

- Q4 2025: Issuance and DEX listing (completed).
- Q1–Q2 2026: Smart contract audit, liquidity pool publication, setup of vesting for team/investors.
- Q3 2026: Preparation for CEX listing, formation of liquidity fund.
- Q1 2027 and onward: Implementation of staking products, launch of buyback policy, and publication of regular NAV reports.

Conclusion:

Budrigancoin tokenomics are designed for long-term stability and trust: fixed issuance, backing by fund assets, strict vesting practices, and buyback/reporting mechanisms. This makes Budrigancoin attractive to investors seeking a digital asset with fundamental value and capital protection, while maintaining flexibility for introducing income-generating products (staking, dividends, tokenized investment products) as regulatory clarity and the ecosystem develop.

CONCLUSION

BudriganCoin represents a new format of digital asset, combining the technological power of blockchain with the fundamental reliability of traditional financial instruments. Created by the American hedge fund BudriganTrade and backed by the fund's real assets, the token establishes a unique investment model focused on long-term value, transparency, and stability.

The limited issuance of 100,000,000 tokens with no possibility of additional minting creates a natural scarcity, forming a solid foundation for the asset's value growth. BudriganCoin does not aim to compete with transactional cryptocurrencies — its primary purpose is capital preservation and growth, making it especially attractive to investors seeking reliable alternatives to traditional instruments.

The project's fundamental components — audits, asset-backing verification, strict risk management, transparent reporting, and rigorous legal standards — ensure a high level of trust. The well-designed roadmap demonstrates consistent, strategic ecosystem development, including infrastructure expansion, exchange listings, and the creation of additional investment products.

BudriganCoin aims to become a key instrument in the digital asset market, offering investors stability, limited issuance, technological reliability, and support from real assets.

The project lays the foundation for a community of long-term holders united by a common goal — to protect and grow capital in an era of rapid financial changes.

BudriganTrade will continue to develop the BudriganCoin ecosystem, ensuring transparency, openness, and project sustainability, securing BGC's position as a premium-level digital asset.

The future of BudriganCoin is a combination of innovation, responsibility, and a stable financial strategy focused on growth and long-term investor trust.

DISCLAIMER

This document is not a source of personal, legal, or financial advice.
